

Editor's Comment:

As I have gone through the review reports and the revised article, the article is recommended for publication in your esteemed journal with few clarification as mentioned below:

1. Adaptation of RPI remains in suspense as the author needs to refer when it was used before in any study and what was the result.
2. There seems to be bias in clearing the content as Author writes the score then could range from 0-66 (0= no eff role, 66= eff role). Again in the next few lines Author writes it ranges from 0-255 (0=no eff role , 255= eff role).
3. Introduction and Review of Literature part should have also been added separately.
4. objective is not clearly stated.

The author needs to clarify the above strictly.

Further the Editorial Decision is favouring the publication of the above article in the esteemed Journal.
