

Editor's Comment:

- The Abstract needs a fair amount of proof-reading but that can easily be done and so is not a major problem.

- I would have been happy if the objectives of the Study are stated after the Review of Literature and after explaining the gap in research that exists.

This is particularly so as studies on Egypt using the PAM framework have been quoted.

- The rest of the paper is largely fine though some proof-reading would be in order. For example a sentence like: Studying the economic impacts of price policies on rice production in Egypt by El-Saeed and [18]. is obviously incomplete. After these small changes are made, the paper can be published.
