

**Editor's Comment:**

The authors did not all corrections suggested by the reviewers. It is important:

1. To describe how did the authors choose survey areas?
2. To insert the values in figure 1
3. In table 2: Mention the meaning of stars (\*\*) in p-value columns below the table
4. To configure tables 1 and 2 in according to the norms of the journal

For the reasons above, the manuscript only must be accepted if the corrections were done. It is mandatory the authors should do the corrections.
