

Editor's Comment:

Having gone through the manuscript and the reviewers' comments, I observed that the corrections made by the reviewer Mohatou Tene are yet to be effected in the revised manuscript. The corrections are very important as this will bring out the beauty of the title of the work and achieve the stated objective. Let the author(s) do the following:

1. Create a table for the results on microbial load of those organisms enumerated and discuss it.
Without this, the work is incomplete.
2. Correct the Kakkori et al in their study instead of 'his study'
3. Look to other corrections proposed by Mohatou Tene
