

Editor's Comment:

A good attempt by the authors.

Issues to be addressed by the authors:

- Please recheck for spelling and grammar mistakes.
- Authors please go through the authors' guidelines in SDI and AJCRS web sites.
- Replace with fresh keywords 4-8 in numbers in MeSH terms in alphabetical order other than those mentioned in the title. In text citations of references must be within square brackets before punctuation in the order of their first appearance in the main text.
- Peer reviewer Serghei Covantev's comment 'the case presentation itself should be without references, please move them to the discussion section thus improving the section and the review' has been ignored by the authors.
- Lot of errors in reference citations. Authors to confirm the changes done now.
- The references should be in Vancouver style. For full details on this refer to the following link to university of Queensland (<http://www.library.uq.edu.au/training/citation/vancouv.pdf>).
- In text citations of references must be within square brackets before punctuation in the order of their first appearance in the main text.
- References list also must be numbered in the same order within square brackets.
- The titles of journals should be in italics and abbreviated according to the style used in Index Medicus/NLM journal abbreviation directory.
- et al should be used only when number of authors exceeds six.

----- *Please see the corrected manuscript with track changes.*

May be accepted after all corrections and suggestions are carried out by the authors.
