

Editor's Comment:

1 I think that the manuscript should be revised carefully before being published:

- Data under the topic "Oral hypoglycemic agents in diabetic kidney disease" were written as a collected raw data and need to be organized and synthesized appropriately. In addition, references for this topic should be mentioned.

- According to the reviewer comment, the references should have similar format.

2 An additional reviewer may be assigned:

A- Revising the manuscript format, e.g. tables and figures' numbers should be incorporated in the written text..... In the same context, are Figures (3, 4 & 5) = (a, b, c) and are under a general title?

B- Revising the manuscript content, e.g. under the topic "Drugs to slow the progression of diabetic kidney disease", the author discussed eGFR and kidney damage. I think this could be better discussed with "screening" section.....

In the same topic, the following paragraph was left incomplete: "Patients should be referred for evaluation for renal replacement treatment if they have estimated glomerular filtration rate <30 mL/min/1.73 m². In brief the management of diabetic kidney disease according to GFR is as under"?????

Above this paragraph is table 2, which also has incomplete title.
