PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The text presents interesting data. However, it brings elements of visual support that add little to the understanding of the clinical picture. The discussion of the research findings is generic. I suggest deepening and better relate the research findings with the available literature. The authors also declare that all ethical issues have been met, but do not specify the approval number of the study. I suggest inserting an approval number in the article.
