<b>Compulsory</b> REVISION comments	<p>The Authors have done a good job. The manuscript presents Ultrasound guided dextrose prolotherapy in patients with Temporomandibular joint disorders and there was a significant reduction in assessed parameters post-intervention.</p> <p>The study was however limited by the sample size.</p> <p>This made it difficult to assess other issues like if gender, age group or other medical conditions could affect response to treatment.</p>	
<b>Minor</b> REVISION comments	<p>Kudos to the authors for this manuscript.</p> <p>However, there are a few issues noticed in the manuscript.</p> <p>The referencing has to be improved upon, there are many floating sentences and references wrongly placed.</p> <p>The authors did not state how common or rare is TMDs.</p> <p>Other comments are in the manuscript</p>	
<b>Optional/General</b> comments
