<b>Compulsory</b> REVISION comments		
<b>Minor</b> REVISION comments	It is an interesting article aiming to illustrate the current situation of Bench Terraces in Southern Zone of Tigray Region with the help of performance evaluation. Moreover, I find that this topic is within the scope of Asian Journal of Environment & Ecology and should be of interest to its readership. I therefore recommend that the article be accepted with minor modification.  I think ONE point need to be added to the section 4. CONCLUSION AND RECOMMENDATION. What kind of specification should a standard BTs meet with or be recommended. Meanwhile, it is much better if the author should explain how the measure of "multipurpose biological SWC on the top and bottom of the bench and the water availability problem should be rectified by a responsible body." be carried out in the future.	
<b>Optional/General</b> comments
