PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	In this manuscript the authors analyse patients undergoing splenectomy for spleen masses. The topic is very interesting and may be useful for clinicians, radiologists, and surgeons. It would be welcomed if radiological imaging (CT, MRI, PET) as well as microscopic imaging were included in the text; since imaging findings are highly recommended. English language is quite acceptable and minor spell checks are required. English proofreading may be advisable. The study has some limitations already highlighted by authors.	
Minor REVISION comments	There are few orthographic mistakes (such as "one patients" in the results section). Besides, sometimes, some digits are written both in numbers and in letters in the same sentence. This following author guideline is not respected (In the text, citations should be indicated by the reference number in brackets [3].)	
Optional/General comments		

PART 2:
