Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The said article has been reviewed and enclosing herewith my comments. The paper is well written. This is a very interesting study and author/ s have collected a unique dataset. The given analysis seems to have good social relevance. All the necessary information regarding Shwitra disease and subsequent Ayurvedic treatment have been discussed. Assessment grading for various subjective parameters were mentioned in neat tabular form. Comparison for before and after the treatment has been done in systematic manner. The article is generally well structured. The paper has a potential to be accepted for the publication	
Minor REVISION comments	SUGGESTIONS: <ol style="list-style-type: none">1. More extensive literature review needs to be conducted2. In introduction section, first of all, to clear the rationale of study, the study significance should be carefully discussed, what was the need of performing the present study. It should not be unnecessarily lengthy and should be precisely oriented towards the aim of the authors?3. Sampling methods need to be discussed more in detail.4. The most significant point is, Shwitra is a very common disease and there are so many allopathic medicines already available in the market. These medicines are very rapid in action having said that few side effects have been observed. So, in my opinion this point should have been addressed. This comparison study / analysis could have been done to prove the utility of Ayurvedic treatment over allopathic medicines. (it's an optional part)	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
