

Editor's Comment:

I have gone through the manuscript and found that the **Cassava Stem Crop Parameters Effect on Cutting Energy** topic is interesting. Possibly will attract many readers

I have observed that the results and discussion sections are too shallow. More time should be given to the author to work on this section. A detailed discussion is needed to attract the attention of the readers.

Also, there some errors that need to be corrected. For example, the following abbreviations should be within the text. For example, the calculation of weight was initially on a wet basis (wb), the pieces of cassava were cut into millimeters (mm).

Abbreviations

wb - Wet basis

mm - Millimeter

J - Joule

MPa - Megapascal

mJ - Millijoule

h - Hour

Let the author follow all the instructions on preparing this manuscript for publication in this journal.

If the author follows and improves in all the above queries, let **this paper be accepted for publications.**

Let us maintain a good standard of the Journal.
