

**Editor's Comment:**

After analyzing the manuscript (2019/AJESS/52758) and made the suggestions for improvement of the reviewers, I consider that it does not have sufficient scientific quality to be published.

Some aspects to improve would be:

- Review the citations of the manuscript, since they do not follow the VANCOUVER regulations correctly
- To deepen the analysis of the data, both from a quantitative and qualitative point of view.
- Clearly establish conclusions based on research objectives and questions
- Improve formatting aspects, such as: there cannot be a table immediately after a title. That is, all tables or figures must be indicated in the text previously.
- Edit English
- Point out the ethical aspects of research, limitations and future research.
