

Editor's Comment:

The authors did not show the approved letter from Ethics Committee.

The study 1 and 2 are retrospective and the study 3 is experimental. It is mandatory the approval for ethics committee. The authors said that ethics committee were they.

Also, the authors mention three studies in one. Why they write a systematic review.

I cannot find a logic methodology and design of the study.

I think that the manuscript is not good to publish in this form. The authors should follow the guidelines to publish a research.
