

Editor's Comment:

My suggestion is to accept the manuscript.

It is important:

1. To review the text of method in abstract
2. To review the formatting of tables
3. To review the following sentence in discussion: This study like many other studies in the literature^[25] showed that during hospitalization, nurses do teach patients about their disease conditions, how to maintain personal hygiene and healthy lifestyle as well as food drug interaction." The authors described many other studies and they cited only study. So, it is necessary correct it.
