

Editor's Comment:

After carefully examining the comments raised by reviewers and response from authors regarding manuscript entitled " Accessory Hepatic Lobe Strangulated In Post-Traumatic Diaphragmatic Hernia", the revised version has been greatly improved. My decision therefore is to ACCEPT only after the following minor corrections have been effected in the revised version.

1. Authors should pay attention to the appropriate use of punctuation marks in the abstract.
2. Under "observation", the statement "A 16-year old woman patient....." should be rephrased as "A 16-year old female patient....."
3. Under "results and discussion" kindly note that the plural form of "literature" is "literature" not "literatures". Kindly check and rectify.
