

Editor's Comment:

I have gone through the improved manuscript of "**GROWTH AND YIELD OF THREE TURMERIC VARIETIES (*Curcuma longa* L.) UNDER MANGO BASED AGROFORESTRY SYSTEM**" and I recommend this manuscript for publication.

However, there are a few specific issues the authors should address by making modifications to the manuscript.

- 1) Section 2.6.1 is best to rewrite one paragraph
- 2) Section 2.6.2 is best to rewrite one paragraph
- 3) Results and discussion: The authors have good sets of data. Instead of state discussion as "**Similar results were found by Pushkaran *et al.* (1985)**", they are requested to highlight the important findings and interpreted concisely giving a strong justification.
