

Editor's Comment:

Taking into account the results of evaluation process of the manuscript Ms_JSRR_69677 currently entitled "Assessment of Water Quality of Major Water Sources for Domestic Use in Shelleng Town, Shelleng LGA Adamawa State, Nigeria", I can say that the authors complied with most of my comments, but before accepting this work for publication, it requires some minor additions:

1. Since the authors absolutely want to leave the Beer-Lambert Law equation, they should consistently explain all symbols used, including: I_0 (not I_o) and I_t , otherwise the values of a, b and c have units,
2. The data in Tables 1 and 2 are not statistically assessed, in order to assess the significance of the differences between the average values, the authors should use one-way analysis of variance and any post hoc test.
