

Editor's Comment:

The authors provide interesting data demonstrating the new data on the stratigraphy of the Ameki Group, South East Nigeria: Implications for the Eocene stratigraphic nomenclature. **On the basis of the reviewers' reports (appended), the paper should be acceptable for publication in Asian Journal of Geological Research** as the authors did some modifications cited by the reviewers. In rewriting the paper, the authors should take special care to address the general comments below and the reviewers' comments.

General comments

- In the title, the SE must be written in full "South East".
- Please also work on the figure text, the text is microscopic.
- For Figure 2 and 3, get a large scale map as done in Figure 1. Also include the scale of the maps.
