EDITORIAL COMMENT'S on revised paper (if any)	Authors' response to editor's comments
<p>1. Authors' answer concerning the activity of SOD. I asked about the superscripts which in Table 2 are indicative for no statistical significant difference of SOD values in subgroup with 70% ethanol only compared to G. kola pretreatment + 70% ethanol. However, the Authors surprisingly have changed "reduced" for "increased" in the text of the manuscript leaving the superscripts in Table 2 as they were before ???? So, are the SOD values significantly different or not ? There was the statement: " Values with different superscript along the same row are significantly different at <math>P &lt; 0.05</math>.", but SOD values are marked as b and b for the aforementioned groups.</p> <p>Please, explain this issue.</p>	<p>What you said was that the discussion is contradicting the results of SOD in table 2. Thus, I changed the 'reduced' to 'increased' without recourse to the table.</p> <p>Having looked at the table carefully now, I observed that no significant difference exist between them as both values have 'b' as their superscript.</p> <p>Sorry for the inconveniences, it was an oversight. Correction has been effected.</p> <p>Thank you for this observation.</p>
