General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	<p>The work numerically studies the effects of some flow parameters such as Hall current, rotation, thermal diffusion (Soret) and thermal diffusion (Dufour) on unstable magnetohydrodynamic natural convective heat and mass transfer of a viscosity, rotation, electrical and incompressible conduction, on the fluid that flows beyond an impulsively moving vertical plate embedded in a porous medium.</p> <p>The results obtained, using the line method (MOL), are interesting and novel and are shown graphically.</p> <p>The work is well written, and with an adequate structure.</p> <p>I consider that in the Conclusions the advantage of these results should have been better emphasized, over those reported in the literature.</p>	
Optional/General comments
