

SDI Review Form 1.6

Journal Name:	Asian Soil Research Journal
Manuscript Number:	Ms_ASRJ_57531
Title of the Manuscript:	Effect of slope length on the soil and nutrients loss from the upland (hill) of Bangladesh
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>The paper on effect of slope and row length on soil erosion and its effect on crop yields has been presented well for the publication in Asian Soil Research. However, major revision is required before accepting it for publication.</p> <p>The comments are given as under.</p> <p>Title : Effect of slope length on the soil and nutrients loss from the upland (hill) of Bangladesh----- include crop yields also-----in title.</p> <p>Abstract: The losses of OC and nutrients are greater and crop yields are higher, -----P I explain the reason.....in discussion-----</p> <p>Key words: Slope length, Soil loss, Nutrient loss, upland (hill) Rice yield-/ Crop yields----- Introduction</p> <p>over the years which are responsible for national yield stagnation and in some cases, even declining crop yields. Considering these facts as stated, the present study has been undertaken to assess soil fertility degradation as affected by slope length-----and what about crop yield-----Discussion--.</p> <p>also the availability of higher nutrients and root growth and ultimately better crop performance. Availability of soil moisture in both the conditions, contribution of tail end----- for improving crop yield requires data -----to be presented. Conclusion</p> <p>What is the outcome of experiment? That should be mentioned in few lines in CONCLUSION.</p> <p>No paging and line numbers have been given</p>	
Minor REVISION comments		
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
