**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<p>The manuscript entitled " PERFORMANCE EVALUATION OF TRACTOR OPERATED GROUNDNUT THRESHER" is good in the field study research. In conclude, Threshing operation is also different in India and among the developing countries. The threshing is done from the old traditional method of using sticks and racks to the modern power threshers. In India the smallholder and marginal farmers do manual threshing. After harvest bunch type plants are stacked in heaps with the pod-end exposed. The crop has remained in this state for a week. The pods are plucked from the plants with labour or threshed by power thresher. Drying the plants for a few days facilitates the threshing operation. In order to get timeliness of threshing, nowadays power thresher is mostly used for groundnut crop. Mechanization of this process removed a substantial amount of drudgery from farm labour.</p>	
<b>Minor</b> REVISION comments		
<b>Optional/General</b> comments
