

SDI Review Form 1.6

Journal Name:	International Journal of Plant & Soil Science
Manuscript Number:	Ms_IJPSS_53537
Title of the Manuscript:	Mineralization and decomposition of four types of compost based on biomass of <i>Sida cordifolia</i> L. in a sandy soil in the semi-arid zone of Niger
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p>	<p>Title</p> <p>Write <i>Sida cordifolia</i> in italic</p> <p>Abstract</p> <p>This is a food of the body of bio and compost. Generally, this use has been taken into account in the quality, decomposition and release of nutrients from these organic materials. This study of the decomposition and mineralization of nutrients of four types of composts (M1P, M2P, M1H and M2H) a dune soil</p> <p>Put the objective before the locality study.</p> <p>Indicate the number of the replications.</p> <p>The decomposition and mineralization of the main elements (nitrogen, phosphorus and potassium) allow the synchronization between the release of nutrients from these composts and the nutrient requirements of millet in a sandy soil.</p> <p>Regain the conclusion.</p> <p>Introduction</p> <p>Line 28: (Voortman, 2010).</p> <p>Put the coma always between the author and the date.</p> <p>Line 35: (Hayashi et al., 2008).</p> <p>Put <i>et al.</i> in italic</p> <p>Line 35: The fertilizer recommendation in Niger is 200 kg ha⁻¹ of NPK compound (15-15-15. Indicate the plant.</p> <p>You can talk the millet importance in the Niger economics.</p> <p>Material and methods</p> <p>Indicate the figure 1 spring.</p> <p>The percentage of dry weight after sampling was determined using the formula:</p> <p>(1) $Ps (\%) = 100 \times \frac{Pt}{P_0}$ where:</p> <p>Ps (%) = Dry weight percentage; Pt = Compost weight at t time; P0 = Initial weight of compost in the bag.</p> <p>The rate of release of nutrients following decomposition was calculated using the following</p>	

formula:

$$(2) T_n (\%) = 100 \times \frac{C_0 P_0 - C_t P_t}{C_0 P_0} \text{ where:}$$

Tn (%)=Nutrient Release Rate,

C0=Initial Concentration of Chemicals (N, P, K) from Compost,

Ct=Concentration of chemicals (N, P, K) compost at t time,

Pt=Weight of compost at t time, P0=Initial weight of compost in the bag.

The decomposition model and decomposition rate constant (k) of each type of compost were determined through the data that were modelled using a single exponential model described by ([Olson 1963](#)):

$$(3) M_t = M_0 e^{-kt} \text{ where:}$$

Mt = dry weight remaining of the compost at time t,

M0 = initial dry weight of the compost.

The time required for the compost to lose half its initial weight (t_{50}) was calculated using the formula described by ([Fening et al. 2010](#)):

$$(4) t_{50} = \frac{-\ln(0,5)}{k}, \text{ where K is the decomposition factor.}$$

You can put in the data collection party.

Results

Humidity, temperature and rainfall

You cite the figure 2 in the text.

Physical and chemical composition of soil at the experimental site

You can cite the table 1 before the table 2.

Discussions

Line 289: Ammonium and potassium are not strongly chemically bound in the soil ([Andrist-Rangel et al., 2007](#)). Ammonium and potassium are therefore strongly exposed to leaching.

Line 306: The recommendation by [Tabo et al. \(2007\)](#) is to apply 2 g diammonim phosphate hill⁻¹ corresponding to an N input of 3.6 kg N ha⁻¹.

Line 329: compost ([Suge et al., 2011](#), [Badar et al., 2015](#)). Studies by ([Esse et al., 2001](#), [Fatondji et al., 2009](#))

Line 336: [Bationo et al. \(2007\)](#) reported that soil organic carbon is a sustainable land management index.

Conclusion
