PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<p>Kindly rephrase your paragraphs and at least in "Methodology" and "Discussion" part please try to keep your own words.</p> <p>This manuscript is being prepared in 2020 so you could have justified it by giving a recent prevalence rate rather than a decade old.</p>	
Minor REVISION comments		
Optional/General comments	<ol style="list-style-type: none"> In the "Methodology" part under "Study site/Area" there is no need to provide such detail of the hospital, just saying a tertiary care Hospital would have been enough.: <p>"The hospital provides emergency obstetric services to women referred from other centers, as well as providing antenatal care and delivery services for low and high-risk pregnant women registered with the hospital. The hospital is well equipped and has availability of qualified team comprising of Obstetricians, Paediatricians and Anaesthetists. There is availability of laboratory and blood bank services in the hospital. There are Five teams headed by consultants that run antenatal care services Mondays through Fridays. There is an average annual ANC attendance of over 12,000."</p> Statistical analysis could have been improved. Multivariate logistic regression models could have been employed to predict the association of possible risk factors with Anaemia. <p>Authors employed Chi square test but the Odds ratio obtained from logistic regression would have given a better result</p>
