

**SDI Review Form 1.6**

Journal Name:	<a href="#">Journal of Agriculture and Ecology Research International</a>
Manuscript Number:	Ms_JAERI_57656
Title of the Manuscript:	GROWTH RESPONSE OF <i>IXORA COCCINEA</i> CUTTINGS TO COCONUT WATER TREATMENT UNDER A LOW POLYTHENE SHEET DOME.
Type of the Article	Original Research paper

**General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/journal/10/editorial-policy> )

**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	Table looks little confusing, no proper explanation of table and their interaction. There is no such clear indication of such eight treatments with their growth parameters. Survival rate not indicating with eight different treatments.	
<b>Minor</b> REVISION comments	Confusing statements: higher the survival rate better the performance of the treatment. If polythene dome reduced the survival rate then there is no point of carrying out research by using polythene dome. The use of polythene dome significantly reduced survival rate of established cuttings as compared with the control.	
<b>Optional/General</b> comments	1.Finding will be more meaningful if adding few higher concentration of coconut water to see up to what extents of higher concentration perform better growth and survival. 2.Diifcult to conclude findings because 110 ml or 120 ml might also perform well than 100 ml.
