

SDI Review Form 1.6

Journal Name:	Journal of Pharmaceutical Research International
Manuscript Number:	Ms_JPRI_67188
Title of the Manuscript:	Correlation between IL-10 as Cancer Biomarker and some Characteristics of Colorectal Cancer Patients
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ul style="list-style-type: none"> - Reference no 5 is not mentioned. - Expand on introduction. Include more details on previous studies specific to CRC. - Authors have mentioned role of IL 10 in prostate cancer. This seems very brief. Please include more details and also include role if IL 10 in other cancers. - Include a detailed description of inclusion and exclusion criteria. - Table 1: Please clarify if the number of males and females are represented as a percentage of total no of study subjects. To me it seems they are an absolute number and not a percentage. 	
Minor REVISION comments	<ul style="list-style-type: none"> - The authors have already expanded on the abbreviations CRC and HC in the abstract and hence can mention only the abbreviation in the remainder of the article. - Minor grammatical errors, such as not using upper case in middle of a sentence. 	
Optional/General comments	<ul style="list-style-type: none"> - There have been multiple studies published looking at correlation between IL 10 and CRC. It is interesting that the authors looked into patient demographic characteristics and their association with IL 10 levels. - But it would be interesting to see if the authors can provide data on correlation between IL10 levels and disease characteristics such as disease progression and its relation to IL 10 levels.
