PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ol style="list-style-type: none"> The authors mention X-Ray Diffraction studies for the evaluation of NLC formulation, however the methodology, results and discussion do not mention the use of this technique. The said formulation is not tested on psoriasis-site for efficacy, but only on a normal skin and hence the authors need to be careful with their claims. Whilst the authors have gone to a great extent for sacrificing the test animals for in vitro skin analysis, the data presented here in control / diseased or treated needs quantification with maybe scale bar and also in terms of destructibility and recovery in psoriasis condition. 	
Minor REVISION comments	<ol style="list-style-type: none"> The discussion could be more scholarly. 	
Optional/General comments	<ol style="list-style-type: none"> All the micrographs of in vitro experiments needs to be presented in similar angle for comparison, captured in one direction. 	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
