Minor REVISION comments	<p>Awareness about the COVID-19 infection is an important aspect of disease control and this is a very relevant study on that line. However, I have a few queries:</p> <ul style="list-style-type: none">- I note that the author has recorded the demographic characteristics of the participants. I wish to know whether there was any association between the demographic variables (education/socioeconomic status/urbanization) and the knowledge/awareness/practice response of the patients. If yes, whether any statistical analysis of this association was done?- A similar study by Deep Kamal et al published in Journal of Marine Medical Society 2020;22(3):66-71.
