PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Introduction is vague and narrative. Please rewrite and focus on the topic of the study. Discussion paragraph is too long and the focus is not centered on the main topic of the article. Please try to justify the results obtained and not merely report the data (already shown in tables) References in text are badly reported (names in Introduction and numbers in Conclusions)	
Minor REVISION comments	Data are well recorded, but I suggest to reduce the number of tables and concentrate data. No data are reported regarding the impact on fetus, please remove it from the title.	
Optional/General comments	Interesting epidemiological study on the periodontal disease in pregnant women in Tabuk region. Data are well reported but revision is required as per comments reported.
